3 Description

The Luxonis OAK-1 is an AI Edge vision system driven by Movidius Myriad X VPU. The system is powered over a USB Type-C. OAK-1 has a single on-board camera which implements RGB vision, piped directly into the DepthAI Myriad X VPU for depth and AI processing. The data is then output to a host via USB 3.1 Gen1

- 1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- 2) According to industry standard Universal Serial Bus (USB) specifications

5 Camera sensors characteristics

5.1 Color Camera

The color sensor on the stereo depth module in addition to color image provides texture information. Usages for the texture information include overlay on a depth image to create a color point cloud and overlay on a 3D model for reconstruction.
